

Make safety our shared destination

Safety Experience

Always follow the procedures !

Particular care during
aircraft cleaning

! Potential effects

During cleaning activities, spraying high pressure water on external sensors or critical components may cause water ingress and can lead to malfunctions during subsequent flight.

✓ Recommendations

Avoid using high pressure jets or vapor for the cleaning tasks on sensitive equipment

Pay special attention to the Warnings and Cautions on how to protect critical components during cleaning operations

Strictly adhere to the Technical Data Documentation

Ensure all instructions are reflected in the job cards
